CORE COMPETENCIES

- Native Android Development
- Kotlin & Java
- Jetpack Compose
- MVVM | MVI | Clean Architecture
- SOLID Principles
- Multi-Module Architecture
- Repository & Use Case Patterns
- Dependency Injection (Hilt, Dagger2, Koin)
- Coroutines & Flow
- Offline-First Architecture
- REST APIs & GraphQL
- Payment Gateway Integration
- CI/CD Automation
- AI-Assisted Development

TECHNICAL SKILLS

Languages
Kotlin, Java, SQL, HTML

Android Frameworks
Jetpack Compose, Material 3, Navigation, ViewModel, LiveData, StateFlow, Room, WorkManager, Paging 3, DataStore

Networking & Data
Retrofit, OkHttp, REST, GraphQL, WebSocket, MQTT

Security
OAuth 2.0, JWT, Keystore, Biometric Auth, SSL/Certificate Pinning, ProGuard/R8, Encryption

SHIVAYOGI HIREMATH

LEAD ANDROID DEVELOPER

SUMMARY

Lead Android Developer with **8+ years** leading feature development on large-scale consumer apps for global brands — **Royal Caribbean, Walmart's Sam's Club, and Emirates NBD** — across banking, insurance, and hospitality, where security and reliability aren't optional.

Specializes in offline-first, **Kotlin/Compose architecture (MVVM/MVI, Clean Architecture)** for apps serving millions of users, with hands-on ownership from architecture decisions through release.

Known for **mentoring engineers** and driving code quality through structured reviews, not just shipping features solo.

Early adopter of **AI-assisted development (GitHub Copilot, Google Gemini)** to speed up delivery without cutting corners on architecture.

Currently seeking a Lead/Senior Android role to bring this experience to a product-focused team.

PROFESSIONAL EXPERIENCE

Pyramid IT Consulting Pvt. Ltd | Client: Cognizant Technology Solutions (Royal Caribbean Group)
Lead Android Developer Nov 2025 – Jun 2026 | Bangalore, India

Project: *Royal Caribbean International — enterprise mobile app for one of the world's largest cruise and hospitality companies, enabling cruise booking, digital check-in, onboard planning, reservations, and guest experiences for millions of users.*

Link: https://play.google.com/store/apps/details?id=com.rccl.royalcaribbean

- Led Android feature development using **Kotlin, Jetpack Compose, MVVM/MVI, and Clean Architecture** for the Royal Caribbean app, serving **millions of guests** across cruise booking, check-in, and onboard experiences.
- Designed scalable, reusable components and integrated secure **REST APIs and GraphQL** services across booking packages, onboard planning, reservations, and guest experience modules.
- Conducted code reviews and architecture discussions, identifying and correcting architectural anti-patterns and performance bottlenecks before release.
- Mentored **8 developers** on Clean Architecture and MVVM/MVI best practices, raising overall code quality and reducing rework.
- Collaborated with Product, UX, Backend, QA, and DevOps teams to deliver high-quality releases using Agile methodologies.
- Leveraged **GitHub Copilot and Google Gemini** to accelerate development and code reviews, cutting routine coding time by **30%**.

Environment: *Kotlin, Jetpack Compose, MVVM/MVI, Clean Architecture, Hilt, Coroutines, Flow, REST APIs, GraphQL, GitHub Actions, CI/CD, JIRA, Firebase, GitHub Copilot, Google Gemini, Agile Scrum*

Synechron Technologies Pvt. Ltd | Client: Emirates NBD
Senior Associate – Technology Apr 2025 – Jul 2025 | Bangalore, India

Project: *ENBD Business Online X — enterprise digital banking platform supporting secure business banking, corporate payments, and financial management.*

Link: https://play.google.com/store/apps/details?id=com.enbd.cbxbusinessonline

- Owned the **Payments Module** for the Business Online X banking app, contributing to core business logic, UI, and backend integration.

Testing & Tools
JUnit, Mockito, MockK, Appium, Android Studio, Postman, Figma

Cloud & Backend
Firebase (Firestore, Realtime DB, Crashlytics, FCM), AWS (Amplify, S3), Google Maps SDK, AdMob

Analytics
Firebase Analytics, Google Analytics, CleverTap, Mixpanel

DevOps
Git, GitHub Actions, Jenkins, Gradle, JIRA, Confluence

EDUCATION

B.E. — Electronics & Communication
Visvesvaraya Technological University
Govt. Engineering College, Haveri
2015

INTERESTS

- Open-Source Contribution
- Tech Blogging
- Learning New Languages

- Set up and maintained **Appium UI test automation**, testing each ticket/task to catch defects before release.
- Conducted code reviews and supported teammates on implementation approaches, helping unblock work during sprint cycles.
- Coordinated with cross-functional teams for requirement clarification and QA, consistently delivering ahead of schedule within a short **3-month engagement**.

Environment: *Kotlin, Jetpack Compose, MVVM/MVI, Koin, Coroutines, RxJava, REST APIs, Jenkins, Appium, Mockito, Junit*

Collabera Technologies Pvt. Ltd | Client: Walmart Global Technology Services India Pvt. Ltd.
Lead Software Engineer Aug 2024 – Feb 2025 | Bangalore, India

Project: *Sam's Club — large-scale retail and membership app supporting shopping, pharmacy, digital memberships, photo services, and omnichannel customer experiences.*
Link: https://play.google.com/store/apps/details?id=com.rfi.sams.android&hl=en

- Delivered features for the **wellness and pharmacy modules** of the Sam's Club app, working within a cross-functional team spanning iOS, backend, QA, UI, and test engineering.
- Assessed feasibility of leveraging **Walmart's codebase and architecture** for Sam's Club's wellness/pharmacy features, supporting a broader initiative to unify the two codebases.
- Contributed to the Photos feature and integrated **GraphQL** services, optimizing performance and maintainability.
- Contributed to migration initiatives, code reviews, and reusable component development with global engineering teams.

Environment: *Kotlin, Jetpack Compose, MVVM, Clean Architecture, GraphQL, LiveData, Hilt, Deep Linking, JUnit, Mockito, GitHub Copilot, Google Gemini, Agile Scrum*

TropoGo Technologies Pvt. Ltd
Lead Software Engineer Nov 2020 – Feb 2024 | Bangalore, India

Project: *TropoGo — India's drone ecosystem super app, providing drone insurance, pilot jobs and training listings, a drone parts marketplace (SkyStore), fly/no-fly zone mapping, weather forecasting, drone loans, and digital flight logbooks.*
Link: https://play.google.com/store/apps/details?id=com.tropogoinsurance&hl=en_IN

- Served as the **sole Android developer** at TropoGo, a product-based startup, owning the Android platform end-to-end from early development through stable release.
- Migrated the entire codebase from **Java to Kotlin** and adopted **MVVM/Clean Architecture**, introducing Room, LiveData, WorkManager, Paging, and Navigation.
- Delivered all pending features within **6 months** of the first stable release, working directly with Backend, Web, iOS, QA, Product, Design, and leadership.
- Owned timeline estimation, feature implementation, and **Play Store release management** — full end-to-end ownership of the app lifecycle.
- Integrated **Google Maps SDK** for fly/no-fly zone mapping and weather-based risk scoring, plus **Firebase (Cloud Messaging, Crashlytics, Auth)** and **CleverTap** for notifications, crash monitoring, and engagement analytics.
- Designed offline-first solutions with **Room Database, caching, and WorkManager sync** for reliable performance in low-connectivity field conditions.

- Reduced technical debt and improved performance, reliability, and scalability through the Java-to-Kotlin migration and architecture overhaul.

Environment: *Kotlin, Java, Jetpack Compose, MVVM, Clean Architecture, Room, Coroutines, Flow, Retrofit, REST APIs, WebSocket, Firebase, Google Maps SDK, CleverTap, Hilt, Payment Gateway Integration, GitHub Actions, GitHub Copilot, Google Gemini*

Neumsoft Innovations Pvt. Ltd

Senior Android Developer Mar 2019 – Mar 2020 | Bangalore, India

Project: *MAHARAH | MAHER — home services and maintenance marketplace connecting customers with professional service providers (electricity, plumbing, A/C, carpentry, flooring, pool maintenance). Built as two apps: Maharah (customer-facing) and Maher (service-provider-facing).*

Link:

Maharah (customer app): https://play.google.com/store/apps/details?id=com.maharah.maharahApp&hl=en_IN

Maher (provider app): https://play.google.com/store/apps/details?id=com.maharah.vander&hl=en_IN

- Led a team of **4 Android developers**, building both the customer-facing (Maharah) and provider-facing (Maher) apps for a home services marketplace.
- Developed core functionality using **Kotlin, Java, and MVVM**, integrating REST APIs for service booking, job matching, and provider profiles.
- Integrated **Room, Firebase, MQTT, Google Maps, and payment gateways**, enabling real-time job tracking, location-based matching, and secure in-app payments.
- Implemented reusable architecture across both apps and collaborated with clients on a shared release roadmap.

Environment: *Kotlin, Java, MVVM, Room, Retrofit, Firebase, MQTT, Hilt, Deep Linking, Social Login, Google Maps SDK, Payment Gateway Integration, Agile Scrum*

Digiretail Software India Pvt. Ltd

Senior Software Engineer Jan 2017 – Feb 2019 | Bangalore, India

Project: *MyDukan — retail commerce platform for vendors, providing market pricing, brand scheme updates, digital invoicing, and free stock/inventory management.*

Link: https://mydukan.in.aptoide.com/app

- Served as the **sole Android developer**, joining 6 months post-launch and taking full end-to-end ownership, working directly with the CEO and Product Owner on roadmap and strategy.
- Within the first **3 days**, identified and resolved a **major Firebase billing issue** caused by unoptimized real-time database calls, redundant API requests, and improper async handling — significantly reducing cloud costs.
- Secured the application by fixing exposed **Google API key credentials** and implementing data security best practices using **ProGuard, SSL Pinning, Certificate Pinning, and encryption**.
- Defined and executed a **monetization strategy**, shipping subscription-based features that generated new recurring revenue.
- Built **LinkedIn-style networking/business features** to drive engagement, growing the app to **200,000+ users** with daily active users up **80%**.
- After ~1 year, **hired and led a growing Android team**, supported the iOS developer, and led the **migration from Firebase to AWS** for backend infrastructure.

Environment: *Java, Android SDK, MVVM, Retrofit, Room, Firebase, Google Maps API, Google Analytics, AdMob, AWS Amplify, Amazon S3, Glide, MoEngage*
